Glossary

Guides

Home & Office

- Remote Desktop to your device from anywhere
- Share files securely across a ZeroTier network
- Host a local website accessible only through your network
- Stream video to securely access camera feeds or control large screens
- Share USB devices with VirtualHere

Networking

- DNS Configuration: Manage and customize DNS using ZeroNSD or a DNS server
- VPN Exit Node: Route all client traffic through a specific ZeroTier device
- NAT: Gather information about NAT type and behavior
- Integrate with Physical Networks: Introduction to Routing and Bridging
- Routing to Physical Networks: Enable traffic flow to and from traditional LANs
- Network Controllers: Control your ZeroTier network using curl
- Layer 2 Bridge: Bridge Ethernet devices over ZeroTier using a Raspberry Pi
- Layer 5 Proxy (Pylon): Tunnel to and from LAN and ZeroTier network using a SOCKS5 proxy

Enterprise

- Multipath Networking: Bandwidth aggregation for better throughput, redundancy, and fault tolerance
- Microsegmentation: Access control within your ZeroTier network
- Private Root Servers: To create your own ZeroTier "moons"
- cloud-init Bootstrapping: Initialize Cloud servers with a pre-configured ZeroTier client

Developer Tools

- Docker Integration: Deploy and use ZeroTier inside containers
- code-server + ZeroTier: Remote VS Code development environment
- Terraform Automation: Infrastructure as code for ZeroTier
