Glossary

QNAP

Install QVPN (recommended)

QVPN provides your NAS with a permanent `/dev/net/tun` device used by ZeroTier. Once you install QVPN you do not need to open it or configure it: App Center -> Search "QVPN" -> Install. If you opt not to install QVPN you will need to find a way to re-create the `/dev/net/tun` on each reboot. Good luck.

Install ZeroTier

Determine the type of processor used in your NAS, then download the latest ZeroTier package. Use the App Center's manual package install option to upload the package to your NAS. You will notice a warning icon next to the app notifying you of a missing digital signature. This is merely telling you that QNAP itself has not verified the authenticity of this app.

PICKING THE CORRECT PACKAGE

Due to the lack of documentation on architecture designations selecting the correct package is an inexact science, as far as I can discern there are the following categories. If you don't see your model on this list or you see an error please let us know:

x86

TS-x51 Series, TS-x51+ Series, TS-x51A Series, TS-x53B Series, TS-x53L Series, TS-x53U Series TS-239 Pro, TS-239 Pro II, TS-239 Pro II+, TS-251, TS-251+, TS-259 Pro, TS-259 Pro+, TS-269L, TS-439 Pro II, TS-451, TS-459 Pro, TS-459U-RP+/SP+, TS-439 Pro II+, TS-459 Pro II, TS-459 Pro+, TS-459U-Home Edition, SS-439-Pro TS-469L, TS-651, TS-851

x86_64

Unknown

arm-x09

Unknown

arm-x19

TS-119P II, TS-119P+, TS-119, TS-219P, TS-219, TS-219P II, TS-219P+, TS-419U II, TS-419P, TS-419U II, TS-439U-RP/SP TS-419P II, TS-419P+, TS-419U, SS-439-Pro

arm-x31

TS-131, TS-231 ,TS-231+, TS-431, TS-431+

arm-x41

TS-128, TS-131P, TS-231P, TS-231P2

Enable SSH

If you've already enabled SSH access on your NAS, then log into an interactive root shell:

```
ssh admin@local-ip
```

Usage

There is no GUI for the ZeroTier package, only a CLI

Upgrading ZeroTier

To upgrade ZeroTier you will need to uninstall the current version of the package and install the desired version. If you wish to preserve your identity you should back up the `identity.secret` file located in `/var/lib/zerotier-one` or `/share/CACHEDEV1_DATA/.qpkg/zerotier` before uninstalling.

NEXT STEPS

Click [here](#) to create your network and start adding devices.
