Remote Desktop

ZeroTier doesn't care whether your connected device is next to you or away at the office - a remote desktop connection has never been easier. Let's get started.

Prerequisites

- A working ZeroTier network with 2 or more devices, per the [ZeroTier Quickstart Guide](#)

Enable and Connect to Remote Desktop

- Windows
- MacOS
- Linux

Option 1: SSH (Terminal/CLI Access)

Go to **System Settings -> General -> Sharing** and enable the **Remote Login** setting to start SSH.

NOTE

While MacOS supports *connecting* to SSH servers as a client out of the box, it requires the above changes to allow it to act as a server itself.

Note down your server's credentials (user name/password). Then, connect from either Windows Powershell, MacOS Terminal (SSH installed by default), or another Linux machine with SSH:

```
ssh <username>@<ZeroTier-IP>
```

Enter password when prompted. Leave blank if no password.

You should now be securely connected via SSH!

Option 2: VNC Remote Desktop

MacOS also has native support for **VNC (Virtual Network Computing)**, which works flawlessly over a ZeroTier connection.
