Resolve PORT_ERROR on Windows

Resolving Port Error

Resolving Port Error

If you're seeing PORT_ERROR on Windows, it's likely that the driver did not get installed correctly for some reason. To fix this, navigate to

C:\ProgramData\ZeroTier\One\tap-windows\x64

then right click on the file zttap300.inf and select Install from the menu.

Note: The folder C:\ProgramData is hidden by default and requires Administrator privileges to access.

If you have other VPN or similar apps that require network drivers, you may want to try uninstalling them, probably rebooting, and reinstalling ZeroTier.
